Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

AND DENSE FIBRILLAR COMPONENT IN THE NUCLEDLUS. IT HAS INTRINSIC GTPASE AND ATPASE ACTIVITIES. MAY PLAY AN IMPORTANT ROLE IN TRANSCRIPTION CYTALYZED BY RANA POLYMERASE I (BY SMILARITY). SUBUNIT: Interacts with Dkc1/Map57, Nop5/Map65 and fibrillarin. SUBCELLULAR LOCATION: SHUTTLES ON CURVILINEAR TRACKS BETWEEN FUCLEDLUS AND CYTOPLASM. THESE TRACKS STEEND FROM THE DENSE FURILLAR COMPONENT OF THE NUCLEOLUS ACROSS THE NUCLEOLUS TO A LIMITED NUMBER OF WICCLEDLUS ACROSS THE NUCLEOLUS TO A LIMITED REPRESIN UNDERGOES RAPID AND MASSIVE PHOSPHORYLATION ON CK-II AND PKC SITES. NOPP140 IS ONE OF THE MOST PHOSPHORYLATION ON CK-II AND PKC SITES. NOPP140 IS ONE OF THE SIMILARITY: CONTAINS I LISH domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

DE Nuclear factor erythroid 2 related factor 1 (NF-E2 related factor 1)

DE (NFE2-related factor 1) (Nuclear factor, erythroid derived 2, like 1).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
MOI. Microbiol. 6:3199-3211(1992).

-:- FUNCTION: INVOLVED IN A GENERAL SECRETION PATHWAY (GSP) FOR THE EXPORT OF PROTEINS. REQUIRED FOR THE TRANSLOCATION OF THE MULTIPLE PECTIC ENZYMES.

-:- SUBCELLULAR LOCATION: Outer membrane (Probable).

-:- SIMILARITY: BELONGS TO THE EXED/OUTD/PULD/XPSD FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Eukaryota, Metazoa, Chordata, Craniata, Vertebrata, Euteleostomi,
